
Ruby Terminal App Coffee Recipes

By William Clifford & Joe Meagalli

Welcome to the Ruby Terminal Assessment

Purpose : The app shows recipes for making coffees. It demonstrates each CRUD function.

Instructions

- Run app
- Choose an option from the main menu:
 1. Create your own recipe following the prompts. Option to save your recipe.
 2. Read a list of existing recipes
 3. Update an existing recipe
 4. Delete a recipe
 5. Exit the app

Challenges:

- The app seemed very simple in the planning stage, however it quickly became much more complicated than expected when building. This made the time for tasks to be completed a lot longer than what we had projected during our planning.
- Our first version used too many classes, which lead to issues making the classes interact with each other.
- Had trouble trying to get the create method to build a recipe with the correct corresponding steps number, as this would be different for each recipe.
- Encountered bugs with users entering non-valid input. Mostly fixed, however some bugs remain due to time constraints.
- Planned to add gems to aid with accessibility of the app, but due to time constraints was not able to.

Potential legal, moral,
ethical and safety
concerns:

None, due to the simplicity
of the app.

Don't wait till the end of
the presentation to give
the bottom line.

Reveal your product or
idea (in this case a
translation app) up front.

What could be improved:

More gems, especially for accessibility.

Eliminate bugs.

Have a larger scope than just coffee recipes.

Better use of classes.
